mid band phase reverse switch, a H.F. output level control, a high frequency mute
switch, and a high frequency phase reverse switch. Rear panel features include
balanced XLR connectors for all inputs and outputs, and a CD horn equalization switch
on each channel. All front panel controls are recessed yet easily accessible, and a
smoked plexiglass security cover is provided with the unit. One of the highest quality
crossovers available at any price, yet within the reach of any working professional.

071-5550-000   **Fender SPL-PCN1 Passive Subwoofer Crossover Network** ....**Price & Delivery TBA**
The Fender SPL-PCN1 is a low cost passive crossover network for use with the SPL-
118s and SPL-215s subwoofers. It is a passive unit, and requires no power. Simply
insert the device after the amplifier, and before the subwoofer and the full range
cabinet. Features include 1/4" phone jack inputs, a sensitivity switch for the full range
enclosure, which reduces the gain of the full range speakers by -3 or -6 dB, thus
emphasizing the bass, and impedance selector switches. It is the perfect low cost way to
add subwoofers to an existing system

POWER AMPLIFIERS

071-3000-000   **Fender SPL-M300 Stage Monitor Power Amplifier** **$509.99**
The Fender/SUNN SPL-M300 is a single channel amplifier, specially designed for
powering on stage monitoring systems. Although it excels at stage monitor amplifica-
tion and feedback control, the M-300 has many other applications as well. It is perfect
where a medium power amplifier is required, combined with sophisticated feedback
control circuitry. It is also ideal for use in many sound contracting applications.
Features include a 300 watt at 2 ohm power amplifier, coupled to a control section
through an access patch point. The control section provides a balanced XLR and 1/4"
TRS line input, an input level control for gain setting, a sweepable frequency high pass
filter, a sweepable frequency low pass filter, and a three band sweepable narrow band
notch filter for feedback control. Each notch filter band provides a "notch depth" slide
fader, and a rotary frequency sweep control. This configuration quickly and easily will
control nearly any feedback situation far more effectively than any graphic equalizer.
The output of the control section is fed into an insert patch point, allowing the inser-
tion of an electronic crossover network or speaker processor. This allows the power amp
section of the M-300 to be used for bi-amplified monitor applications, with the internal
amplifier being used for high frequencies, and a larger external amp to be used for low
frequencies. The M-300 is built in a two rack space unit. Two speed forced air fan
cooling is used, as is the proprietary DeltaComp™ amplifier and speaker protection
system

A complete self teaching course on professional audio, covering everything from the performer, to the equipment, to room acoustics, and finally to the listeners ear. As opposed to a typical dry, technical tome that goes right over the head of most readers, making the connection is a humorous yet informative book that assumes no previous knowledge of pro audio, yet brings the reader up to speed quickly, without offending the intelligence of anyone with some knowledge of the field. A valuable resource, and the perfect companion for any Fender pro audio sound system. "Making The Connection" is also extremely useful for training a retailers sales staff. Highly recommended!
