

THE SUNN® 215 BASS SPEAKER ENCLOSURE

Your new Sunn 215 Bass speaker enclosure is constructed from 3/4" (1.9 cm) 7-ply Birch Maple Plywood and is capable of handling up to 300 Watts of powerful clean sound. The Sunn 215 features two 15" (38.1cm) speakers with 56 oz (1.6 kg) magnets and is designed for use with the Sunn 1200S, the Sunn 300T or any other professional quality bass amplifier. In order to more fully understand the operational characteristics of your Sunn 215 Bass speaker enclosure, please read through all instructions and heed all caution and safety warnings on both your amplifier and Sunn 215 Bass speaker enclosure.

CONNECTING MULTIPLE 215 BASS SPEAKER ENCLOSURES

Because the Sunn 215 Bass Speaker Enclosure's jacks are wired in parallel, multiple 215 cabinets can be "daisy chained" together providing additional output for larger venues. To do so, simply connect them by inserting a speaker cable (16 gauge or larger) with a 1/4" plug into the input jacks on the rear panel of each cabinet. *Note: If using a tube amplifier, your tube amp could fall into protect mode or even be damaged by using an improper impedance load. Therefore, it is important to heed all caution and safety warnings on both your amplifier and Sunn 215 Bass speaker enclosure.*

SPECIFICATIONS
